Subtrees

Given an undirected tree rooted at vertex **1**, find number of subgraphs of this tree which are trees themselves.

INPUT

First line contains **T**, number of testcases.

Each testcase has an integer \mathbf{n} , followed by $\mathbf{n-1}$ lines containing \mathbf{u} and \mathbf{v} , denoting that there exists an undirected edge between \mathbf{u} and \mathbf{v} .

OUTPUT

Output T lines, each containing the answer for that testcase modulo **100000007**, followed by new line. Do not add any extra whitespaces or newlines in your output.

CONSTRAINTS

1<= T <=20 1<= n <=10^6 1<= u,v <=n

Time Limit: 3 seconds
